PROJECT

ENBEL - Enhancing Belmont Research Action to support EU policy making on climate change and health

The Horizon 2020 project ENBEL brings together leaders in climate change and health research and coordinates a network of international health and climate research projects under the Belmont Forum's Collaborative Research Action (CRA) on Climate, Environment and Health (CEH) and EU-funded projects. ENBEL aims to achieve convergence between climate change and health research and policy making, to support European and global endeavours to build a low-carbon, climate-resilient future. The overall concept of ENBEL is a bottom-up approach to networking and cooperation across often separate worlds of climate and health research communities. The network is bringing together researchers and experts on climate change and health and contribute to bridge gaps in approaches and methods that can make collaboration difficult, and thereby laying the ground for establishing actionable knowledge on climate change-related health risks. The network will develop evidence syntheses and co-produce with stakeholders a series of tailor-made knowledge products. The key thematic focus is on environmental and occupational heat, air pollution (including from wildfires) and climate-sensitive infectious diseases, with specific attention given to high-risk groups and populations. ENBEL draws upon research on climate and health in Europe, incl. the Arctic region, East and Southern African regions, the Asia-Pacific region, and the South and Central Americas. The video is from one of the climate change and health projects in the ENBEL network (PREP - Protection Resilience Efficiency and Prevention for workers in industrial agriculture in a changing climate) dealing with the topic of heat stress for outdoor workers and preventive solutions.
