

## AREAS OF ACTIVITY

**Climate Risks & Responses, Disaster Risk Management**

**Climate Services**

**Consulting, Service Provider**

**Health Sector**

**Investment & Financing**

**Social Science & Humanities**

## SESSIONS

**Tuesday, June 08, 2021**

---

12:00 - 14:30

At your service: climate knowledge and information as enablers of climate action -  
Champion: Roger Street - University of Oxford

## OPPORTUNITIES

### PROJECT

#### **KE4CAP - Stepping Up Knowledge Exchange Between Climate Adaptation Platforms**

Stepping up Knowledge Exchange between Climate Adaptation Platforms (KE4CAP) is a network enabling platform developers and operators to come together to share knowledge and good practices, to learn from current approaches, and to work together to address common and emerging challenges, thus helping to deliver the best possible support for climate adaptation action. As the need for adaptation action grows, it is increasingly recognised that decision-makers and policymakers require access to relevant and high-quality information to support the development and implementation of adaptation strategies and plans. These requirements are also recognised within, and seen as consistent with, implementing the Paris Agreement. Web-based climate change adaptation platforms provide a vital means of helping meet these requirements by enabling access to information, evidence, and guidance consistent with supporting decision-making for adaptation planning at local, national, and transnational scales. In Europe and internationally, there are an increasing number of such knowledge platforms. All are at different stages of development and capabilities, from early planning of new platforms through to advanced platforms now being relaunched, and all face challenges that limit their effectiveness in supporting climate action. The KE4CAP project provides a forum to stimulate knowledge exchange between

platforms, to advance cooperation, and to inspire the evolution of platforms in terms of scope, governance, content coverage, functionality and management.
