

# KÖVET Association for sustainable economies

KÖVET Association KÖVET initially focused on environmental protection. It has developed many important and popular products from the Green Office Program to the Money back through the Window Program. KÖVET has also put great emphasis on changing the attitude toward environmental protection, organizing conferences and workshops today. During the years KÖVET expanded its profile and devoted more attention to sustainability. The purpose of the association today is to help companies and other institutions on the way of sustainability.

AREAS OF ACTIVITY

**Bioeconomy, Business Development , Climate Risks & Responses, Disaster Risk Management , Consulting, Service Provider, Education, EU Projects , Media & Communication**

## PROJECT

### **LIFE-CLIMCOOP – Cooperation of cities and local companies for climate change adaptation**

The overall goal of the LIFE-CLIMCOOP project (LIFE19 CCA/HU/001320) is to develop, test and demonstrate collective actions between a city government and a multinational company to reduce local climate risks and enhance joint climate change adaptation for vulnerable urban and industrial areas in the selected region of Hungary. Based on a Climate Vulnerability Assessment, the joint Climate Adaptation Strategy of the city of Kazincbarcika and the BorsodChem Plc. will be completed. Both actors will integrate climate change adaptation into their key strategic policies and practices. The project partners will also jointly implement small-scale nature-based adaptation measures to reduce local vulnerability through modifying roof rainwater runoff, expanding urban green surfaces, converting former industrial sites into multi-functional adaptation assets, creating ecological areas and updating the urban irrigation plan. A water treatment prototype will be developed to reuse grey water of different origins and to optimise the water consumption of BorsodChem Plc. Smart adaptation tools will also be tested to explore the adaptive capacity of small water courses and natural water retention, and an urban tree inventory on an interactive map. The model of Water Stewardship, a methodological guide and a collection of good practices will be used to replicate and transfer the project results in other locations. Contact: Alexandra Anna Szőke <https://www.ecca21.eu/participants/651> Official website of the project: <https://life-climcoop.hu/en/home/>

## Applies to

Local level, Climate policy, Water management, Citizen engagement, Knowledge transfer, Adaptation strategy, Extreme weather events, Education and training, Climate change adaptation, Networking and cooperation, Disaster risk management and reduction, Exchange of knowledge and good practices, Biodiversity, ecosystem restoration, ecosystem services, Assessment of climate change impacts (physical, economic, social...)
